

Protect Your Website from 3rd & 4th Party Scripts

Source Defense VICE

Source Defense's VICE isolates all 3rd party JavaScript from the webpage in real-time and leverages a fully automated and machine-learning assisted set of policies that control the access and permissions of all 3rd party tools operating on a website (including the 4th and 5th parties they chain-in).

Source Defense utilizes real-time sandbox isolation technology that provides a unique client-side website security solution focused on preventing malicious activity originating from website supply chain vendors (also known as Magecart and Formjacking attacks).

VICE is a client-side application security solution that continuously protects your website from digital skimming, formjacking and Magecart attacks, preventing data breaches and reducing your risk of non-compliance. It uses behavioral analysis and advanced machine learning to automatically detect vulnerable scripts, suspicious PII access and data leakage from your users' browsers.

Benefits

Reduce Risk of Data Breaches

- > Detect and prevent digital skimming and Magecart attacks
- > Prevent attacks from internal threats
- > Protect theft of visitor information from every angle of attack

Visibility & Control

- > Real-time and full visibility of script interactions
- > Visibility into information scripts are trying to capture
- > Control 4th and 5th party scripts by default

Easy to Deploy

- > Seamlessly deploy by simply copying and pasting two lines of code into your website's page headers
- > Agentless, SaaS-based solution
- > Simple and powerful two-step management process ensures efficient, secure protection

Key Capabilities

- > Protect web applications from 3rd & 4th party attacks
- > Real-Time Detection & Protection
- > Ability to provide strict permissions as needed
- > Detailed analysis of script behavior, actions taken, and necessary permissions
- > Simple copy-and-paste deployment process

Our Platform

Source Defense is a pioneer and innovator of technologies that leverage machine learning, industry regulations and best practices to extend website security to the client itself, the web browser. With the Source Defense platform, you never have to choose between innovating and protecting what matters most, your customers & their data.

Source Defense is the market leader in Client-side Security for websites, providing real-time threat detection, protection and prevention of vulnerabilities originating in JavaScript. The Source Defense patented Website Client-side Security Platform offers the most comprehensive & complete solution addressing threats and risks coming from the increased usage of JavaScript, libraries and open source in websites today.

The ADMIN management console, VICE sandboxing and WiPP data shield offerings utilize patented technology and are deployed by leading Fortune500 enterprises in the Financial, Retail, and Healthcare markets. Headquartered in Israel, with branches across the US and a strong community of global valuable partnerships, Source Defense is the most innovative, reliable and trusted partner in the fight against client-side attacks.
